

# AESTHETIC PRODUCTS

SkinMedica's innovative line of professional skin care products are the result of almost two decades of skin care research and clinical experience. Our product philosophy emphasizes a multi-factorial approach to enhance skin appearance and reduce the signs of aging. This approach encompasses the need for interaction of a complex system of key ingredients to bring about optimal clinical benefit in the shortest period of time.

Ingredients such as growth factors, antioxidants, retinoids, essential fatty acids, and hyaluronic acid as well as other molecules naturally found in skin have been thoughtfully chosen and incorporated to provide all of the elements necessary for enhancing the natural process of skin rejuvenation.
